Office Action Summary

Application No.

09/816,993

Applicant(s)

TECU ET AL.

Examiner

Sam Rimell

Art Unit

2175

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-13 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-13 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on ____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. ____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) ____.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). ____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: ____.

Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 4: The phrase "said content database" lacks antecedent basis.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4, 6, 8, 9, 10, 11 and 13 are rejected under 35 U.S.C. 102(e) as being anticipated by Abram et al. (U.S. Patent 6,462,778).

Claim 1: Col. 6, lines 19-56 describe a method and system in which a digital camera receives a digital image and also receives position data from a GPS system that is associated with the image. Using the GPS data, content data such as a city name is retrieved from a look-up table and then either annotated directly on to the image or used to create a file name for the image col. 6, lines 53-56).

Claim 2: Once the annotated images are created, they are associated with a file name (col. 6, line 56) and stored in memory 150 (content database). The user can query the memory using the file name in order to obtain and access the file.

Claim 3: Col. 6, lines 19-37 describe the querying of a look-up table (location database) with GPS data (position data). A location name, such as city name is then retrieved from the database and annotated on the image.

Art Unit: 2175

Claim 4: Both the content database and location database contain text.

Claim 6: The annotated image is delivered to the processor (140) and display (180) which read as a client.

Claim 8: Col. 6, line 24 establishes that the position data includes longitude and latitude coordinates.

Claim 9: Col. 3, line 14 establishes that the image may be stored in memory (150).

Claim 10: The image can be considered "conditionally accessible" in the sense that the user may be limited to accessing the image by having to access the processor (140) before obtaining the image.

Claim 11: Col. 6, line 55 indicates that the image may be printed.

Claim 13: Abram et al. discloses a location database (look-up table), content database (memory 150) and server (140). The server (140) receives image data and position data in the form of GPS coordinates, retrieves content data in the form of city names and annotates the image using the content data. The image may then be printed (col. 6, line 55) or delivered to a client display (180).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Abram et al. (U.S. Patent 6,462,778).

Art Unit: 2175

Claim 5: Col. 1, lines 31-39 of Abram et al. does disclose the receipt of chronological data (time stamps). The time stamps can be used to retrieve the image based on the time and date the image was obtained.

However, Abram et al. discloses this in background of the invention, rather than being associated with the specific preferred embodiments in the Abrams et al. invention. However, in light of this teaching, it would have been obvious to one of ordinary skill in the art to modify the preferred embodiment of the Abram et al. invention to include time stamps associated with the images and having the user query the content database (memory 14) using the time stamp data in order to access a desired image. This has the advantage of giving the user an additional option for image retrieval.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 7 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Abram et al. (U.S. Patent 6,462,778) in view of Obradovich (U.S. Patent 6,525,768).

Claim 7: Abram et al. differs from claim 7 in that it does not disclose the usage of web pages. However, Obradovich at col. 3, lines 26-27 and col. 3, line 59) teaches that GPS encoded and annotated images can be delivered to an end user as a web page obtained from the Internet. FIG. 48H also gives an illustration of what such a page would look like to the end user.

It would have been obvious to one of ordinary skill in the art to modify Abram et al. to obtain images or images annotated with GPS data from the Internet and delivered to the user as

Art Unit: 2175

web page. This would provide the advantage of giving the user access to a wider variety of information, such as traffic and weather information, rather than limiting access to just images taken by the user.

Claim 12: Abram et al. teaches the receiving image data and GPS position data (col. 6, lines 19-56). A query is sent to a look-up table (location database) to obtain place names that can then be annotated to the image and used to create a file for that image using the place name. Once the file is created, the user can then query for the file name in the memory (content database) and retrieve the file. The file can then be displayed to the user or printed.

Abram et al. differs in that it does not deliver the file to the user as a web page, although this feature is taught by Obradovich. It would have been obvious to one of ordinary skill in the art to modify Abrams et al. with the teachings of using web pages established by Obradovich for the reasons provided in claim 7 above.

Any inquiry concerning this communication should be directed to Sam Rimell at telephone number (703) 306-5626.
